1 Animals

13 Animals can come in all shapes and sizes. There are very small
25 animals like ants, flies, and spiders. There are small animals like snails,
37 mice, and rabbits. Animals that are very heavy are animals like elephants
46 and hippos. Some animals are very tall, like giraffes.

60 Animals can live on land or in the water. Some animals that live on
74 land are deer, bears, and moose. Some animals that live in the water are
86 whales, dolphins, and sharks. Those animals live in the ocean. They are
89 called marine animals.

101 Animals that live in lakes and rivers include trout, bass, and turtles.
113 These are called fresh water animals. Some animals, like birds, can fly.
124 Some birds that you might know are falcons, eagles, and hawks.

138 Some animals can live in the water, on land, and can fly. A good
153 example of this is the duck. Ducks can do all three. Ducks can look for
169 food on land and in the water, and they can fly places they want to go
171 pretty fast.

183 The world is filled with interesting animals that are amazing to see.
199 It is fun to learn about what they do and how they live. You can learn
212 about animals at school, in books from the library, and by looking for
218 information about them on the Internet.
